## **1 GENERAL PRINCIPLES (CBA)**

- 1.1 Treatment should only be given in line with these general principles. Where patients are unable to meet these principles, in addition to the specific treatment criteria set out in this policy, funding approval may be sought from the ICB's Evidence Based Interventions Service (EBI) by submission of an EBI application form
- 1.2 Clinicians should assess their patients against the criteria within this policy prior to a referral and/or treatment
- 1.3 Treatment should only be undertaken where the criteria have been met and there is evidence that the treatment requested is effective and the patient has the potential to benefit from the proposed treatment. Where the patient has previously been provided with the treatment with limited or diminishing benefit, it is unlikely that they will qualify for further treatment
- 1.4 Referring patients to secondary / community care without them meeting the criteria or funding approval not secured not only incurs significant costs in out-patient appointments for patients that may not qualify for surgery, but inappropriately raises the patient's expectation of treatment
- 1.5 On limited occasions, the ICB may approve funding for an assessment only in order to confirm or obtain evidence demonstrating whether a patient meets the criteria for funding. In such cases, patients should be made aware that the assessment does not mean that they will be provided with surgery and surgery will only be provided where it can be demonstrated that the patients meet the criteria to access treatment in this policy
- 1.6 Patients should be advised being referred does not confirm that they will receive treatment or surgery for a condition as a consent discussion will need to be undertaken with a clinician prior to treatment
- 1.7 The policy does not apply to patients with suspected malignancy who should continue to be referred under 2 week wait pathway rules for assessment and testing as appropriate
- 1.8 Patients with an elevated BMI of 30 or more may experience more post-surgical complications including post-surgical wound infection so should be encouraged to lose weight further prior to seeking surgery.  
<https://www.sciencedirect.com/science/article/pii/S1198743X15007193>  
(Thelwall, 2015)
- 1.9 Patients who are smokers should be referred to smoking cessation services in order to reduce the risk of surgery and improve healing

## 2 POLICY CRITERIA BASED ACCESS

- 2.1 Patients who are suspected of suffering from malignancy should be referred under the two-week cancer pathway which does not require funding authorisation
- 2.2 Manual syringing to remove ear wax should not be offered
- 2.3 Consider ear irrigation using an electronic irrigator, micro suction, or another method of earwax removal (such as manual removal using a probe) for adults in primary or community ear care services if:
- 2.4
- the practitioner (such as a community nurse or audiologist): has training and expertise in using the method to remove earwax
  - is aware of any contraindications to the method the correct equipment is available
- 2.5 Electronic ear irrigation should be carried out in Primary Care, if self-care has failed to adequately reduce the clinical aspect of the patient's ear wax
- 2.6 Electronic ear irrigation should be carried out by a suitably trained practitioner, following pre-treatment wax softening, either immediately or for up to 5 days beforehand
- 2.7 If electronic ear irrigation is unsuccessful;
- Repeat use of ear wax softeners or
  - Instil water into the ear canal 15 minutes before repeating electronic ear irrigation
- 2.8 If two attempts at electronic ear irrigation in primary care have been unsuccessful then the patient should be offered micro-suction from a primary care commissioned service performed by a suitably trained practitioner
- 2.9 A referral for ear wax removal in Secondary Care is only commissioned for patients meeting any of the criteria set out below:
- a) Undergoing regular appropriate treatment, such as de-waxing a mastoid cavity
  - b) There is a foreign body, including vegetable matter, in the ear canal that could swell during irrigation and requires urgent removal because of risk of infection etc.
  - c) If they require micro-suction because of anatomical abnormalities and wax removal is deemed unsuitable for the primary care micro suction service
  - d) Has previously undergone ear surgery (other than grommets insertion that have been extruded for at least 18 months) and wax

removal is deemed unsuitable for the primary care micro suction service

- e) Has a recent history of Otagia and /or middle ear infection (in past 6 weeks)
  - Acute Otitis Externa and wax removal is deemed unsuitable for the primary care micro suction service
- f) Has keratosis Obturans
- g) Has a current perforation or history of ear discharge in the past 12 months and wax removal are deemed unsuitable for the primary care micro suction service
- h) Has had previous complications following ear irrigation including perforation of the ear drum, severe pain, deafness, or vertigo and wax removal is deemed unsuitable for the primary care micro suction service
- i) Ear drops have been unsuccessful and irrigation and micro-suction in primary care are contraindicated
- j) Patients ear wax has not been removed successfully by **two attempts** at electronic irrigation and **one attempt** at primary care micro-suction

2.10 Patients who are not eligible for treatment under this policy, please refer to section 4 EVIDENCE BASED INTERVENTIONS APPLICATION PROCESS on how to apply for funding with evidence of clinical exceptionality

### **3 EVIDENCE BASED INTERVENTIONS APPLICATION PROCESS**

- 3.1 Patients who are not eligible for treatment under this policy may be considered on an individual basis where their GP or Consultant believes exceptional circumstances exist that warrant deviation from the rule of this policy
- 3.2 Completion of a **Generic EBI Application Form** by a patient's GP or Consultant is required
- 3.3 Applications cannot be considered from patients personally
- 3.4 Only electronically completed EBI applications will be accepted to the EBI Service
- 3.5 It is expected that clinicians will have ensured that the patient, on behalf of who they are forwarding the application for, is appropriately informed about

the existing policies prior to an application to the EBI service. This will reassure the service that the patient has a reasonable expectation of the outcome of the application and its context

- 3.6 EBI funding application are considered against clinical exceptionality. To eliminate discrimination for patients, **social, environmental, workplace, and non-clinical personal factors cannot be taken into consideration.**

For further information on 'clinical exceptionality' please refer to the NHS Somerset ICB EBI webpage [Evidence Based Interventions - NHS Somerset ICB](#) and click on the section titled Generic EBI Pathway.

- 3.7 Where appropriate photographic supporting evidence can be forwarded with the application form

- 3.8 An application put forward for consideration must demonstrate some unusual or unique clinical factor about the patient that suggests they are exceptional as defined below:

- Significantly different to the general population of patients with the condition in question
- Likely to gain significantly more benefit from the intervention than might be expected from the average patient with the condition

#### **4 ACCESS TO POLICY**

- 3.1 If you would like further copies of this policy or need it in another format, such as Braille or another language, please contact the Patient Advice and Liaison Service on Telephone number: 08000 851067

- 3.2 **Or write to us:** NHS Somerset ICB, Freepost RRKL-XKSC-ACSG, Yeovil, Somerset, BA22 8HR or **Email** us: [somicb.pals@nhs.net](mailto:somicb.pals@nhs.net)
