

Smarter Care

Moving from Two Inhalers to One in Asthma

Existing Treatment Regime

Suggested Treatment Regime

Single inhaler (maintenance and relief)
enables easier transition to MART / AIR

DPI pathway 

WockAIR

Fobumix Easyhaler

MDI pathway 

Bibecfo**

Luforbec**

Proxor**

Refer to the list of inhalers in the formulary [Venn Diagram](#)

 We recommend moving single inhalers to a combination inhaler even in patients not yet ready for MART or AIR

 *Salmeterol as a single or combination inhaler must not be used for MART or AIR

 Choose the most suitable inhaler for the patient.
Consider inspiratory flow and inhaler technique.

 Low carbon footprint.
Choose a dry powder inhaler (dpi) preferentially to reduce the carbon footprint, unless the patient cannot use one.

 High carbon footprint.

**All metered dose inhalers (mdi) must be used with a spacer.
